SERVICES

Committee

- **Organization Co-chair in Organizing Committee**, 47th IEEE/ACM International Conference on Software Engineering (ICSE 2025), The First International Workshop on Software Engineering for Autonomous Driving Systems (SE4ADS 2025) 2024.09
- **Program Committee Member**, 47th IEEE/ACM International Conference on Software Engineering (ICSE 2025), Artifacts Evaluation Track 2024.09
- **Program Committee Member**, ACM Conference on Computer and Communications Security (CCS 2024), Artifacts Evaluation Track 2024.05
- **Program Committee Member**, 21st International Conference on Software Architecture (ICSA 2024), Artifacts Evaluation Track 2024.03

Reviewer

- **Reviewer**, ACM Transactions on Software Engineering and Methodology (TOSEM 2024), Full Length Technical Paper 2024.07
- **External Reviewer**, 33rd ACM SIGSOFT International Symposium on Software Testing and Analysis (ISSTA 2024), Technical Papers 2024.05
- **Reviewer**, ACM Conference on Computer and Communications Security (CCS 2024), Artifacts Evaluation Track 2024.05
- **External Reviewer**, 47th IEEE/ACM International Conference on Software Engineering (ICSE 2025), Research Track 2024.04
- **Reviewer**, 21st International Conference on Software Architecture (ICSA 2024), Artifacts Evaluation Track 2024.03
- **Reviewer**, IEEE Robotics and Automation Letters (RA-L 2024) 2024.01
- **Reviewer**, 41st IEEE Conference on Robotics and Automation (ICRA 2024), Contributed papers 2023.11
- **External Reviewer**, 32nd ACM Symposium on the Foundations of Software Engineering (FSE 2024), Research Papers 2023.11
- **Sub-reviewer**, 20th IEEE International Conference on Software Architecture (ICSA 2023), Technical Track 2022.12
- **Sub-reviewer**, 27th IEEE International Conference on Software Analysis, Evolution and Reengineering (SANER 2020), Research Track 2019.11

Volunteer

- **Student Volunteer**, 31st ACM Joint European Software Engineering Conference and Symposium on the Foundations of Software Engineering (ESEC/FSE 2023) 2023.12
- **Student Volunteer**, Southern California Software Engineering Symposium (SuCSES 2023) 2023.05
- **Organizer and Volunteer**, The Workshop of Intelligent Real-time Methods and 2021.04

TALKS

- Paper Presentation, “Regression Models for Performance Ranking of Configurable Systems: A Comparative Study” at the Annual Conference on Software Analysis, Testing and Evolution (SATE 2019), Hangzhou, China 2019.11.22

RESEARCH EXPERIENCES

Misconfiguration Software Testing for Failure Emergence in Autonomous Driving Systems

- Proposed ConfVE, the first configuration testing approach in the ADS domain, which serves as a testing framework that utilizes scenarios from pre-existing ADS scenario-generation techniques and a genetic algorithm to produce alternative configurations to identify emerged failures in an ADS by preventing the masking of failures and maximizing the possibility of producing bug-revealing violations.
- Designed 3 novel module-level oracles that detect bug-revealing violations in ADS scenarios that occur frequently in our ADS configuration-testing experiments.
- Introduced a duplicate elimination process to minimize duplicate failure generation and identify emerged failures, which works by checking the similarity of traffic violations using an unsupervised clustering technique and representing those violations as the key features of driving scenarios with respect to each different violation type.

scenoRITA: Generating Diverse, Fully Mutable, Test Scenarios for Autonomous Vehicle Planning

- Introduced scenoRITA, a search-based testing framework, with a novel gene representation and domain-specific constraints, that automatically generates valid and effective driving scenarios.
- Employed an unsupervised clustering technique to group driving scenarios with similar violations according to extracted features, to automate the process of identifying and eliminating duplicate violations.
- Implemented 5 test oracles and corresponding fitness functions for the autonomous vehicle (AV), introducing the first search-based testing technique for AV software that uses multiple test oracles simultaneously and considers both comfort and safety violations as part of those oracles.

Doppelgänger Test Generation for Revealing Bugs in Autonomous Driving Software

- Presented DoppelTest, a framework that generates bug-revealing scenarios by making every obstacle an autonomous vehicle (AV) and models traffic control (e.g., traffic signals and stop signs), which automatically addresses the key challenge of determining responsibility after an AV is involved in a violation (e.g., collision).

Regression Models for Performance Ranking of Configurable Systems: A Comparative Study

- Conducted a comparative study on the common regression models used in performance ranking of software configuration research. The research is the first one that compares the regression models in terms of their ability to find good configurations and the measurement cost of sampling.

Multi-Objective Configuration Sampling in Configurable Systems

- Proposed a sampling method, which uses multi-objective optimization to minimize the number of samples we need to measure and maximize the ability to rank good configurations to the front according to the Pareto optimization. The research aims to balance the trade-off between the measurement cost and the ranking ability in the performance ranking problem.

HONORS & SCHOLARSHIPS

- ACM SIGSOFT CAPS in 2024
- NSF Student Travel Award in 2023
- Chair's Award, University of California, Irvine in 2021
- Scholarship for Outstanding Students (Top 10%) in 2017-2018, 2016-2017, and 2018-2019
- Chinese Undergraduate Computer Design Contest (Regional Level, Second Prize) in 2018

SKILLS & INTERESTS

- **Research Interests:** Autonomous Driving System, Software Configuration, Automated Software Testing, Performance Ranking
- **Programming Language Skills:** Python, Java, C++/C
